

The CrystalColor 5

For maintenance free and uninterrupted light

The CrystalColor 5 is a hypermodern LED fixture with unparalleled high light output. Powered with white light the CC5 outperforms the light output of a 200Watt tungsten halogen lamp. The compact stylish fixture gives you unique benefits:

- Delivers high quality white light or pure colours, directly generated by the LED crystals
- Has a lifetime of over 50.000 hours; no re-lamping over a period of nine years
- Produces no harmful radiation (infrared or ultraviolet); does not affect your valuable belongings.

Due to the maintenance free life time over nine years, the ALL CrystalColor 5 is the most reliable light source and in terms of cost of ownership also the most efficient light source available today. The CrystalColor can save up to 77% of your energy costs. The CC5 is made of solid anodised aluminium and the LED assembly is sealed for life and suitable for indoor and outdoor use (IP68).

The CC5 is popular in museums, art galleries, shops, showrooms, cinemas, theatres, saunas, swimming pools, laboratories and hospitals.

Monochromatic colours

The CrystalColor 5 can be supplied with any coloured light beam of your choice. White light is available from 2950K to 8000K. Any colour can be rendered on request; the warm white colour has a rendering index of Ra90.

Four optics

The powerfull MultiMirror® optics guaranties a minimum loss of light and the ability to drop the light with high efficiency on the right spot. The CrystalColor comes with standard optics of: 12°, 30°, 50°, 120°x140° and 12°x50°. The ALL elliptical lenses are popular to drop a wash light along walls and ceilings or for the illumination of glass structures and windows.

Electrical Specifications

To enhance the CrystalColor family All4light developed remarkable LED drivers that are equipped with NanoPower® technology. These drivers conduct a perfect balance between lifetime and light output of the fixture. Dedicated types of NanoPower® LED drivers are available to suit any application for indoor and outdoor use. For general use NanoPower® LED driver 10108 is applied.

RGB colour mixing, ColorMotion

CrystalColor 5 fixtures provided with ColorMotion technique can produce any colour within the visual spectrum. The CrystalColor 5 spotlights can be programmed with uninterrupted changing colours and different fade times. Colours can also change with fast switching lights, stroboscopic effects and even trick the human eyes with these effects.

Colour control and dimming

Colour control is generally realized by the All4light 25Watt dimmable LED drivers, type 10105. These dimmable drivers are controlled by an industry standard 1-10Vdc input circuit. For more sophisticated control DALI or DMX based components are often used. Colour mixing is mostly supplied in projects. To make such a lighting installation easier for the contractor, All4light provides the service to preconfigure a complete control system on order and built this system in a suitable housing. The contractor only has to connect the control panel and the CC5 spotlights to this housing.

Sizes and accessories

The CrystalColor 5 is a small unit: 153(W)x94(H)x55(D)mm and is provided with a robust mounting bracket. Many accessories are available for the CC5 spotlight: brackets for recessed mounting, ceiling clips, rail systems, fixed points etc.
